Assignment 04

E-Waste Entry Form — Basic Fields Use Case in Zoho Creator

EcoCycle – E-Waste Collection & Recycling Management

Name: Jenell S G

REG NO: 240701212 | Programme: B.E. Computer Science and Engineering

AIM

To design and build the E-Waste Entry form of the EcoCycle application in Zoho Creator using the Basic Fields of the Form Builder (Single Line, Number, Radio, Drop Down, Email and Phone), so that every e-waste item is captured in a structured record with its quantity, age, hazardous flag, condition and collection location, and to verify the records in the auto-generated All E-Waste report.

PROCEDURE

1. Application and form creation

- Logged in to Zoho Creator and created the application **EcoCycle** (link name **ecocycle**).
- Opened the Form Builder and created the form **E-Waste Entry**.
- The form captures what the waste is, how urgent it is, where it is stored and who reported it. Zoho Creator generated the report **All E-Waste** automatically for the form.

2. Drag-and-drop of Basic Fields

The Basic Fields palette was expanded on the left panel and the fields of Table 4.1 were dragged onto the canvas and configured through the Field Properties panel.

Field label	Field type	Mandatory	Purpose
E-Waste Name	Single Line	Yes	Name of the item, for example laptop or printer
Category	Drop Down	Yes	Laptop, Computer, Printer, Monitor
Quantity	Number	Yes	Number of items; one input to the priority score
Age(years)	Number	Yes	Age of the item; one input to the priority score
Contains Hazardous Material?	Radio	Yes	Yes / No; marks the item for careful handling
Condition	Drop Down	No	Working, Not Working, Damaged
Collection Location	Single Line	Yes	Block where the item is stored
User Name	Single Line	Yes	Person who reports the item
Email	Email	Yes	Contact e-mail of the user
Phone Number	Phone	No	Contact number, country code +91 by default
Priority Score	Number	No	Calculated by the workflow
Priority Level	Drop Down	No	High, Medium or Low; set by the workflow
Collection Status	Drop Down	No	Pending at creation; set by the workflow
Recycling Status	Drop Down	No	Not Processed at creation; set by the workflow

Table 4.1: Fields of the E-Waste Entry form

3. Form layout

The form is a single-page form with the labels on the left and the inputs on the right. Dropdown fields show -Select- until a value is chosen, and mandatory fields carry a red asterisk. The last four fields are filled by the workflow and are not typed by the user.

4. Configuring field properties

- Mandatory was enabled for the fields marked Yes in Table 4.1.
- The Email field uses the built-in e-mail format check and the Phone field offers a country-code selector with +91 as the default.
- Recommended additional rules (not seen in the screenshots): quantity and age restricted to non-negative values, so that a negative number cannot distort the priority score.

5. Workflow

1. The user opens the E-Waste Entry form from the menu **E-waste Entries**.
2. The user fills in the item details and clicks **Submit**.
3. Zoho Creator checks the mandatory fields and formats.
4. A new record is created in the All E-Waste report.
5. A Deluge form workflow calculates the priority score and level and sets Collection Status = Pending and Recycling Status = Not Processed.
6. For a High-priority item the workflow sends an e-mail notification (reported in the project, not demonstrated).

6. Submitting sample records and reviewing the report

Four sample items (laptop, computer, Printer and monitor) were submitted through the live form. The All E-Waste report was then opened to verify that every value was stored correctly.

OUTPUT

The following screenshots represent the completed form and report.

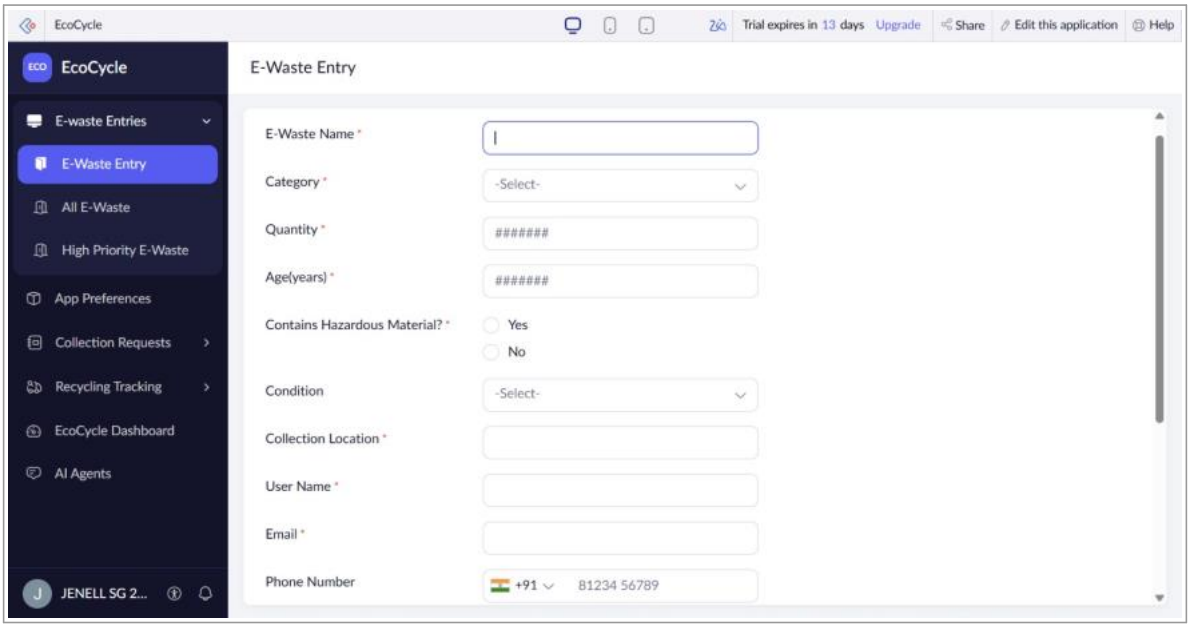

Fig 1. E-Waste Entry form (upper part): Single Line, Drop Down, Number, Radio, Email and Phone fields, with the Basic Fields marked by a red asterisk.

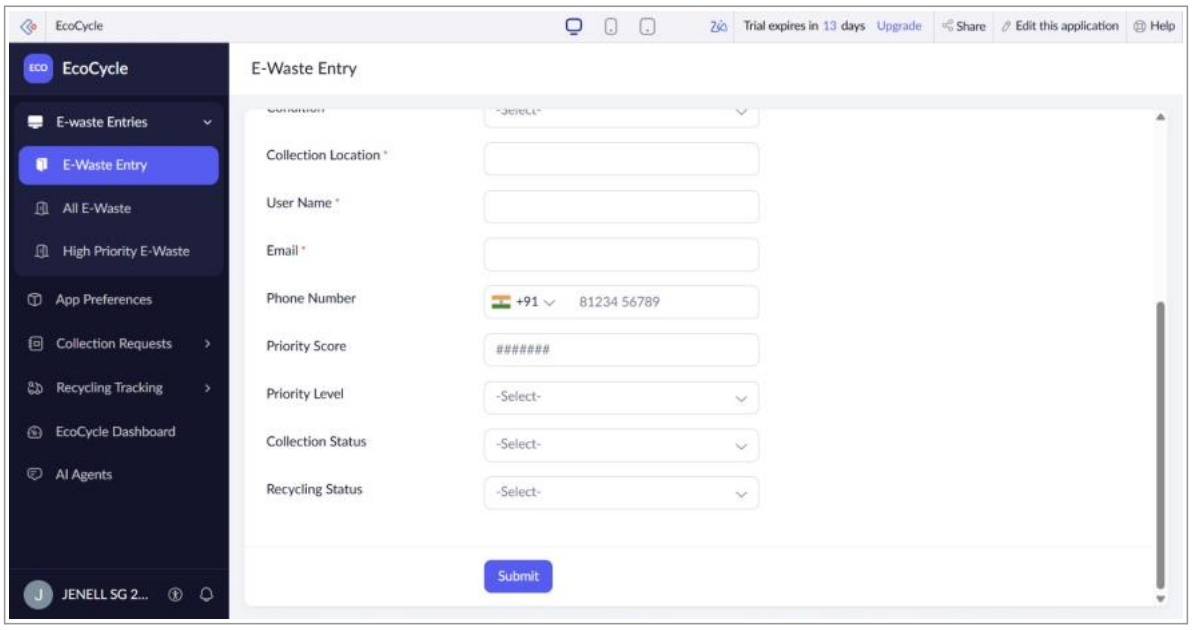

Fig 2. E-Waste Entry form (lower part): Collection Location, User Name, Email, Phone and the four workflow-filled fields (Priority Score, Priority Level, Collection Status, Recycling Status).

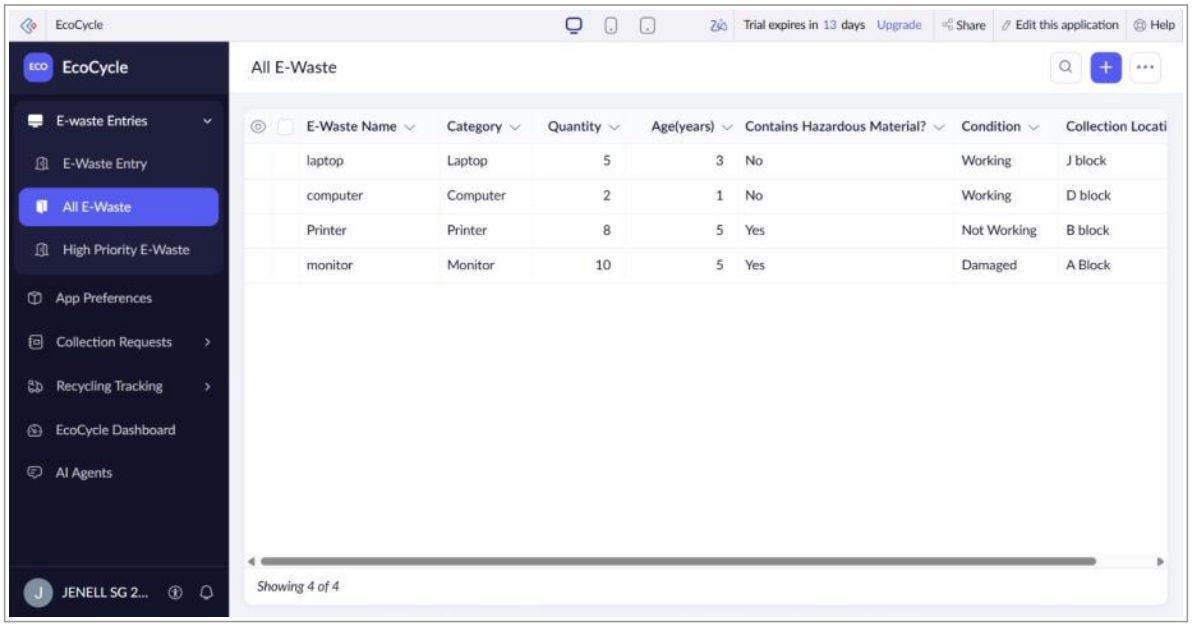

Fig 3. All E-Waste report — four records (Showing 4 of 4) with name, category, quantity, age, hazardous flag, condition and location.

Entry	Category	Qty	Age (yrs)	Hazardous	Condition	Location
laptop	Laptop	5	3	No	Working	J block
computer	Computer	2	1	No	Working	D block
Printer	Printer	8	5	Yes	Not Working	B block
monitor	Monitor	10	5	Yes	Damaged	A Block

Table 4.2: Records stored in the All E-Waste report

RESULT

The E-Waste Entry form was successfully designed and built in Zoho Creator using the Basic Fields Single Line, Number, Radio, Drop Down, Email and Phone. Each field has a clear role in capturing the

item, its hazard and condition, its location and the reporting user. The four sample items were stored correctly and are listed in the All E-Waste report, which supplies the inputs for the priority calculation. A paper list or a spreadsheet of discarded equipment was replaced by one structured digital record per item.
