EXPERIMENT 5

Collection Request and Recycling Tracking Forms — Basic Fields Use Case

EcoCycle – E-Waste Collection & Recycling Management

Name: Jenell S G | Register Number: 240701212

1. Aim

To build the Collection Request and Recycling Tracking forms of EcoCycle with the Basic Fields Single Line, Email, Phone, Number, Drop Down, Date and Multi Line, and to generate the Collection Requests and Recycling Tracking reports that let staff follow each request from submission to recycling.

This addresses the problem of keeping three things together: who has asked for e-waste to be collected and when, and what happened to the item afterwards. Structured forms give every request and every recycling job a clean digital record.

2. Procedure

1. **Create the Collection Request form:** a form named Collection Request was created in the EcoCycle application.
2. **Add requester fields:** Requester Name (Single Line), Email (Email), Phone Number (Phone, +91 default) and Collection Location (Single Line) were added.
3. **Add request fields:** E-Waste Category (Drop Down), Quantity (Number), Preferred Collection Date (Date, dd-MMM-yyyy), Preferred Time (Drop Down), Request Status (Drop Down: Pending, Scheduled, Collected), Collection Completed Date (Date) and Remarks (Multi Line).
4. **Create the Recycling Tracking form:** E-Waste Name (Single Line), Category (Drop Down), Quantity (Number), Collection Date (Date), Recycling Status (Drop Down, default Not Processed), Recycling Method (Drop Down), Recycler Name (Single Line) and Remarks (Multi Line) were added.
5. **Configure properties:** mandatory flags were set (red asterisk) and the default value Not Processed was set for Recycling Status.
6. **Submit sample records:** four collection requests and three recycling records were submitted through the live forms and the auto-generated reports were opened to verify the values.
7. **Verify the workflow:** a lead is created in Zoho CRM for each request (Experiment 7) and the past-date check rejects an earlier preferred date (reported; see Experiment 6).

3. Output

3.1 Form views

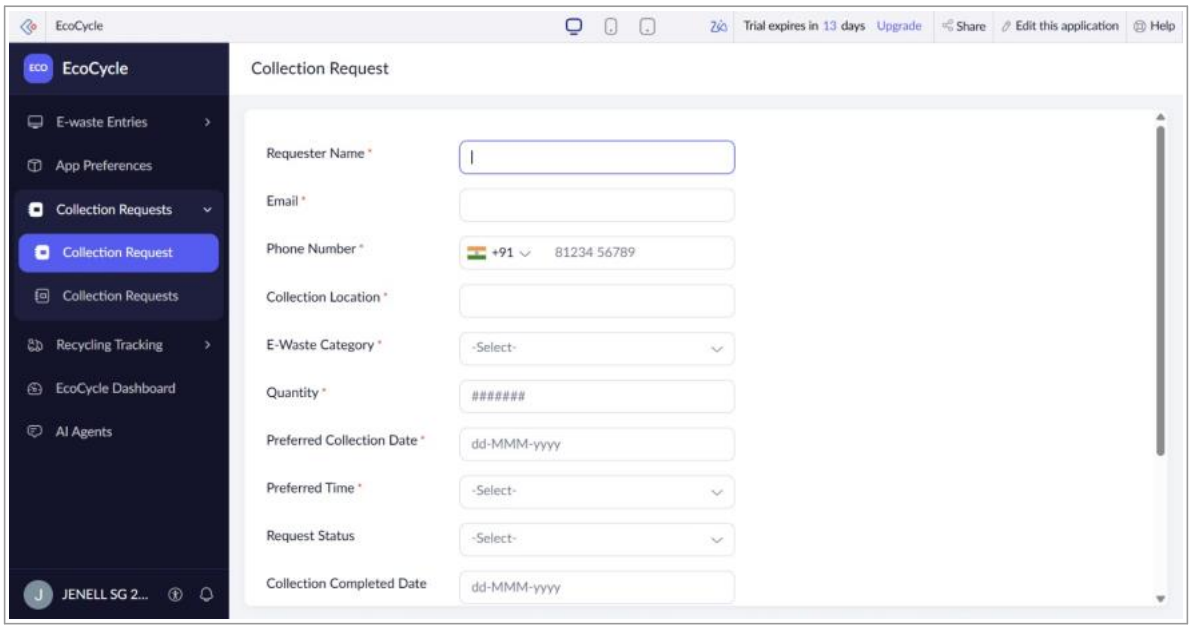

Fig 3.1 — Collection Request form (upper part): requester, contact, location, category, quantity, date and time fields.

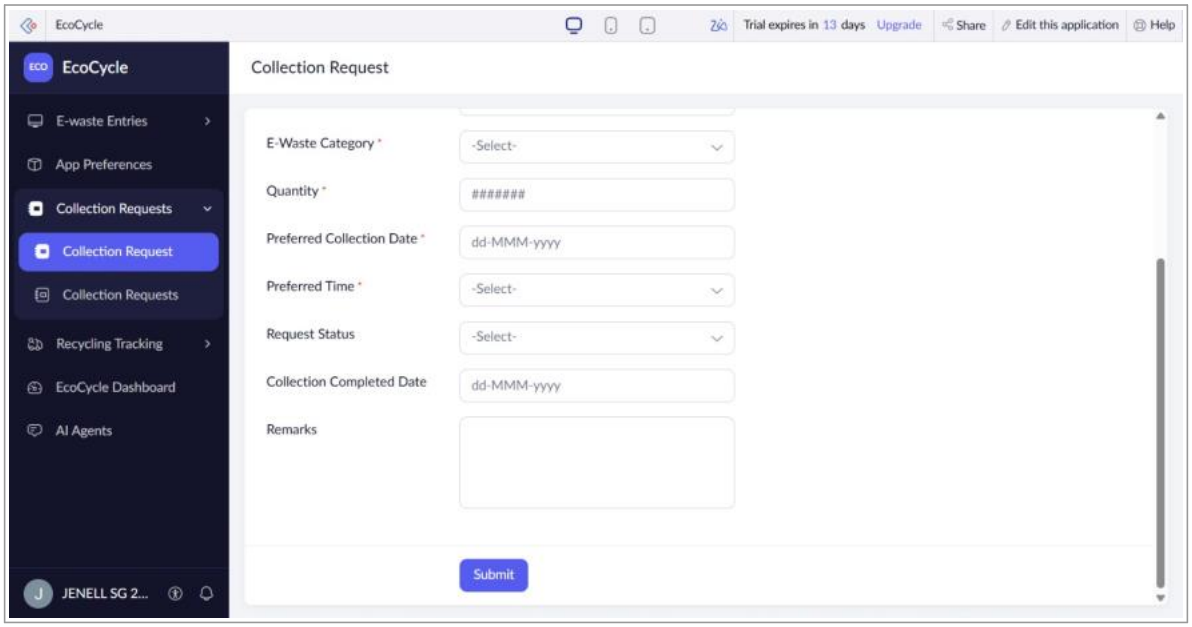

Fig 3.2 — Collection Request form (lower part): Request Status, Collection Completed Date and the Multi Line Remarks box.

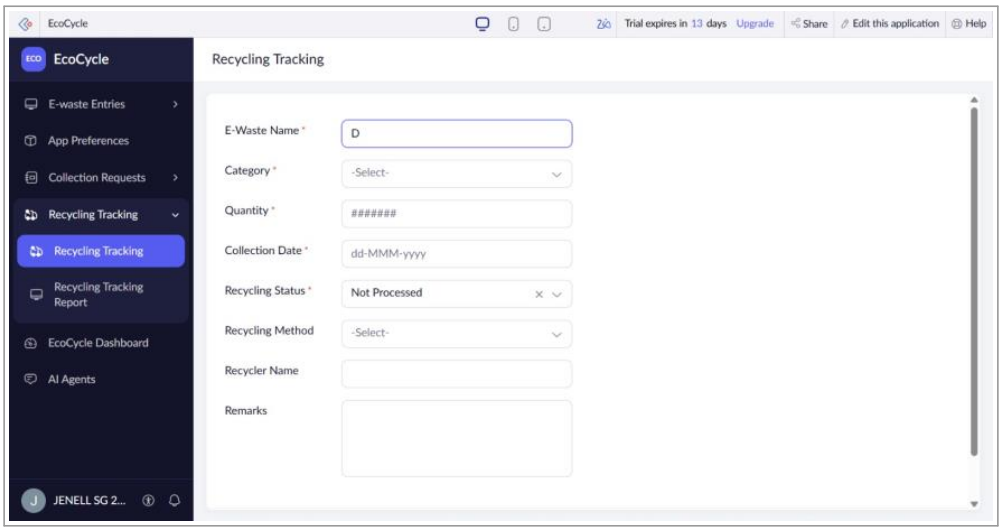

Fig 3.3 — Recycling Tracking form: Recycling Status opens with Not Processed already selected.

3.2 Field properties

Form	Field	Type	Mandatory	Configuration seen
Collection Request	Requester Name, Email	Single Line, Email	Yes	Red asterisk
Collection Request	Phone Number	Phone	Yes	Country code +91 by default
Collection Request	Collection Location, E-Waste Category, Quantity	Single Line, Drop Down, Number	Yes	Red asterisk
Collection Request	Preferred Collection Date	Date	Yes	Format dd-MMM-yyyy; past date rejected (reported)
Collection Request	Preferred Time	Drop Down	Yes	Value seen: Morning
Collection Request	Request Status, Completed Date, Remarks	Drop Down, Date, Multi Line	No	Optional
Recycling Tracking	E-Waste Name, Category, Quantity, Collection Date	Single Line, Drop Down, Number, Date	Yes	Red asterisk
Recycling Tracking	Recycling Status	Drop Down	Yes	Default Not Processed
Recycling Tracking	Method, Recycler Name, Remarks	Drop Down, Single Line, Multi Line	No	Optional

3.3 Report views

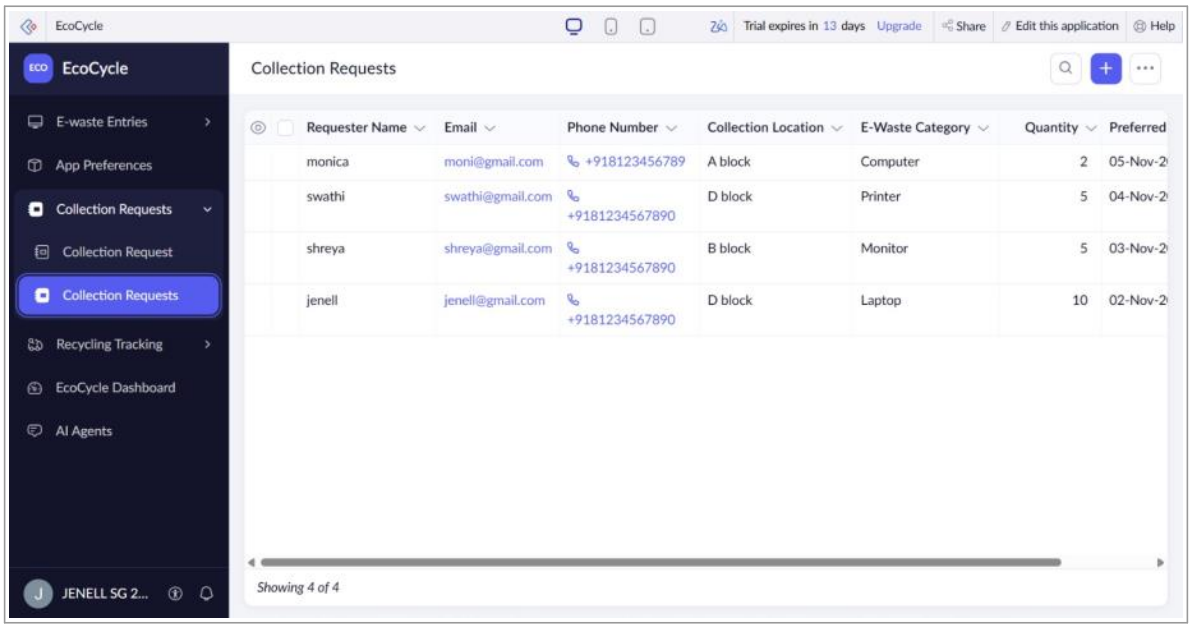

Fig 3.4 — Collection Requests report: four requests (Showing 4 of 4).

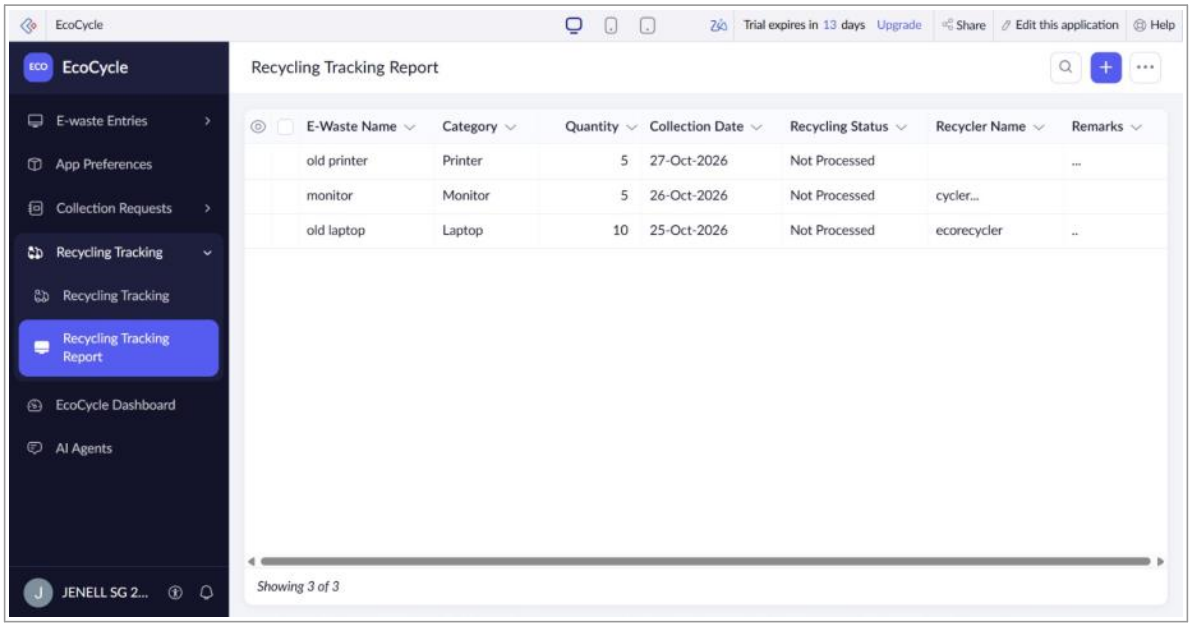

Fig 3.5 — Recycling Tracking Report: three records, all Not Processed (Showing 3 of 3).

Requester	Category	Qty	Location	Preferred date
monica	Computer	2	A block	05-Nov
swathi	Printer	5	D block	04-Nov
shreya	Monitor	5	B block	03-Nov
jenell	Laptop	10	D block	02-Nov

Table 3.1: Collection requests stored in the report

Item	Category	Qty	Collection date	Status	Recycler
old printer	Printer	5	27-Oct-2026	Not Processed	—
monitor	Monitor	5	26-Oct-2026	Not Processed	cycler...
old laptop	Laptop	10	25-Oct-2026	Not Processed	ecorecycler

Table 3.2: Recycling records stored in the report

3.4 Process flow

1	2	3	4	5	6
Requester opens Collection Request	Fills in the fields	Submit: mandatory and format checks	Record appears in Collection Requests; lead created in Zoho CRM	Item collected; Recycling Tracking record entered	Status followed in the report and the dashboard

Fig 3.6 — Flow from request submission to recycling follow-up.

4. Final Result

The Collection Request and Recycling Tracking forms were built in Zoho Creator using the Basic Fields Single Line, Email, Phone, Number, Drop Down, Date and Multi Line. Each field was mapped to a role: requester identity and contact, collection place, quantity, preferred date and time, status, and the recycling method and recycler.

Four collection requests and three recycling records were submitted and are listed correctly in the auto-generated reports. Observed gaps are recorded for improvement: Collection Location is free text and shows values in different cases (A Block and A block), recycler names and remarks of two records are incomplete, and the recycling records are not linked to e-waste entries by a lookup.

The exercise met its objective: requests and recycling jobs are now held as structured records that the staff can filter, follow and report on.
